Viraj Parmar

Cloud & DevOps Engineer | AWS | Infrastructure Automation | Backend Systems

+1 (856) 347-6808• parmarviraj.m04@gmail.com• LinkedIn • GitHub

PROFESSIONAL SUMMARY

Master's student in Computer Science (GPA 4.0) with experience in full-stack development, cloud deployment, and backend engineering. Skilled in building scalable SaaS applications, optimizing database systems, and deploying cloud-enabled services using AWS, Docker, and Linux. Experienced in cloud infrastructure management, deployment automation, and monitoring of distributed systems.

TECHNICAL SKILLS

Programming Languages: Advanced Java, Python, C++, JavaScript, .Net
Cloud & DevOps: AWS (EC2, S3), Docker, CI/CD, Linux
Libraries & Frameworks: Express.js, React.js, Next.js, Node.js
Databases: MongoDB, MySQL, Redis
Skills : Cloud Architecture, REST APIs, Distributed Systems, Microservices, Spring Boot, Spring MVC, Hibernate (JPA)

EDUCATION

Master of Science in Computer Science (GPA: 4) **August 2025 – Present**
Rowan University Glassboro, NJ
Bachelor of Computer Engineering (B.Tech)(CGPA:9.53) **July 2021- May 2025**
Indus Institute of Technology and Engineering Ahmedabad, Gujarat

EXPERIENCE

Full-Stack Developer **February 2024 – March 2025**
Green Apex Solutions Ltd. Ahmedabad, GJ

- Led development of a scalable POS SaaS platform, designing backend services and RESTful APIs to support restaurant operations and real-time order processing.
- Optimized system performance by migrating databases from Realm to MongoDB, implementing efficient data models and indexing for improved scalability in a multi-tenant environment.
- Engineered backend-driven features including role-based dashboards, order management systems, and reporting tools, ensuring clean architecture, maintainable code, and efficient data handling.

Front-End Developer Intern **November 2024 – January 2024**
Prodigy InfoTech Remote

- Developed responsive UI components using HTML, CSS, and JavaScript, improving mobile usability and reducing layout inconsistencies across devices.
- Integrated REST APIs into front-end workflows, enabling dynamic content rendering and smoother interactions.
- Reduced UI bugs by improving debugging workflows and applying clean-code practices.
- Collaborated with mentors to refine UI/UX decisions aligned with modern accessibility and design standards.

PROJECTS

Library Management System (Java, Spring Boot, MySQL):

- Built a backend using Spring Boot with Spring Data JPA. Developed RESTful CRUD APIs for books and users, with controllers invoking Service logic and Repository JPA classes for database access.
- Optimized queries with indexes, improving response times.

Cloud Infrastructure Deployment Pipeline | AWS · Docker · CI/CD · Linux · Nginx

- Designed and deployed a containerized web application using Docker and AWS EC2 infrastructure.
- Implemented a CI/CD pipeline using GitHub Actions to automate application build, testing, and deployment.
- Configured Nginx as a reverse proxy server for improved application performance and traffic routing.
- Automated deployment workflows reducing manual configuration effort and improving release reliability.

Nivas Sathi Hostel Finder | Full-Stack Application

- Developed a full-stack web platform enabling users to search and compare hostel accommodations using Google Maps API for location-based filtering.
- Integrated an AI-powered recommendation assistant to personalize accommodation suggestions based on user preferences.
- Implemented secure payment API integration to enable seamless booking transactions.
- Designed RESTful backend APIs to handle user authentication, search queries, and booking workflows.

Student Database Management System | Full-Stack Database Project **Rowan University**

- Designed a normalized relational database system with **13 tables and 10K+ records.**
- Implemented stored procedures, triggers, and transactional operations for academic management processes.
- Optimized indexing strategies achieving **15× faster query performance.**
- Created reporting views for GPA tracking, attendance monitoring, and financial analytics.

Julius Silvert B2B Ordering Platform

- Developed a B2B commerce frontend using React 19 and Vite with modular architecture and URL-based routing (hash navigation, query parameters) for efficient product navigation.
- Implemented account management features including requisition lists, Wishlist state, and Address Book CRUD with persistent client-side storage and accessible UI components.
- Optimized frontend performance by minimizing re-renders and managing async state, achieving Lighthouse scores of 95+ Performance, 100 Accessibility, and 90+ SEO.

CERTIFICATIONS

- **Google Cloud Professional Data Engineer**
- **AZ - 900**
- **Google Cloud Skill Boost (20+ badges)**
- **Python Data Analysis with Pandas & NumPy**
- **Front-End Web Development**

EXTRACURRICULAR ACTIVITIES

Student Affairs Committee Member | Indus University | Jan 2022 – Nov 2024
